

## TEC SCRN PRODUCTS

# CENTRE DISCHARGE SEPARATOR

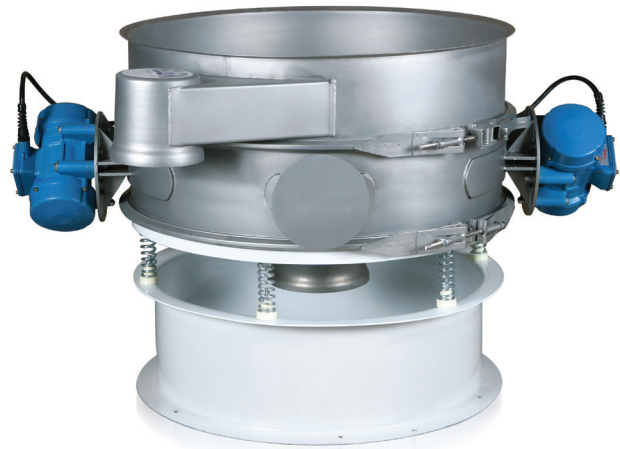

We take great pride in manufacturing high quality round vibrating separators. Our units can be customized to meet any industry standard; from food to pharmaceutical, chemical to ceramics.

## TEC SCRN INNOVATION

The low profile, straight-through discharge of our Centre Discharge Separator allows for high-capacity product separation. Dual external vibrator motors are positioned at 180 degrees and can strategically be adjusted to provide an infinite range of separating patterns for a variety of products.

## QUALITY

Our Centre Discharge Separator outperforms any in the industry – reliably, efficiently and economically sorting by size or separating liquids from solids. Our separators are designed to be among the safest in the industry, in full compliance with Ministry of Labour Standards. The Tec Scrn Centre Discharge Separator is constructed of the highest quality stainless steel and rigorously tested to withstand even the harshest of conditions.

*Centre Discharge Separators are available in the following diameters: 24", 30", 36", 40", 48" and 60".*

## VERSATILITY

The Centre Discharge Separator is available with multiple decks, providing up to five particle size classifications that offer screening capability as fine as 500 mesh (25 micron). We construct them using premium quality 14 gauge stainless steel, finished to sanitary standards if required, in diameters ranging from 24" to 60".

*Tec Scrn is an industry-leading manufacturer of separation process equipment, designed and built to the highest standards of quality and precision. We have the ability to fabricate custom design products to meet unique applications or to your current specifications.*
