

## TEC SCRN PRODUCTS

# G-MAX SEPARATOR

We take great pride in manufacturing the highest quality separators. Our G-Max Separator earns its name from how it harnesses maximum gravity force, and it can be customized to meet any industry standard; from food to pharmaceutical, chemical to ceramics.

## TEC SCRN INNOVATION

The G-Max Separator is available on 48" and 60" machines. Ideally suited for separating applications that involve large and dense products, the powerful motor speed of our G-Max Separator delivers 2200 rpm at the shaft; or twice the rpm of your standard motor.

Our QuickAdjust lead angle system allows the operator to rapidly react to any changes in feed stock variations. Tec Scrn engineers will work with your product in our test facility to establish the most efficient configuration for your unique screening process.

## TEC SCRN QUALITY

Our G-Max Separator outperforms any in the industry – reliably, efficiently and economically. Our separators are designed to be among the safest in the industry, in full compliance with Ministry of Labour Standards. The Tec Scrn G-Max Separator is constructed of the highest quality stainless steel and rigorously tested to withstand even the harshest of conditions.

*G-Max Separators are available in the following diameters: 48" and 60".*

## TEC SCRN VERSATILITY

The G-Max Separator is available with multiple decks, providing up to five particle size classifications. We construct them using premium quality 14-gauge stainless steel, and finish them to sanitary standards if required.
