

SEPARATORS FOR THE BIOFUEL INDUSTRY

Vibrating Separators for the Biofuels Industry

Tec Scrn International proudly provides innovative separating solutions that are integral to the North American biofuels industry.

Our circular vibrating separators are highly versatile pieces of equipment that are widely used within the biofuels industry to sort dry materials and separate solids from liquids. Specific biofuel applications include sifting agricultural byproducts, animal fats and plant and vegetable oils, among others.

G-Max Separators are available in the following diameters: 48" and 60".

Centre Discharge Separators for the Biofuels Industry

Our Centre Discharge Separators, Circular Vibrating Separators and G-Max Separators can accommodate a wide range of biofuel applications. Our vibrating separators are available with multiple decks, providing up to five particle size classifications, constructed from the highest-quality stainless steel and can be customized to your precise requirements.

Our vibrating circular separators for agriculture are available in diameters ranging between 24" and 72".

Centre Discharge Separators are available in the following diameters: 24", 30", 36", 40", 48" and 60".
