

SEPARATORS FOR THE CERAMICS INDUSTRY

Vibrating Separators for the Ceramics Industry

The quality of a ceramic product is defined by its micron range, which is achieved through the right combination of vibratory separation and precise particle sizing. Tec Scrn's separating equipment performs to these exacting standards, making them favourites in the ceramics industry. A combination of controlled feed rates and our UltraSonic or VibroMesh screens will ensure that you achieve the highest degree of particle size control. It's no wonder we're a top choice of so many ceramics manufacturers across North America.

Centre Discharge Separators for the Ceramics Industry

Our Centre Discharge Separators and Circular Vibrating Separators are ideally suited for the precision required in the ceramics industry. Our vibratory drive system can be strategically adjusted to provide an infinite range of separating patterns to suit any micron range, and our innovative systems enable the operator to quickly react to changes in product variations and specifications. Our vibrating separators for ceramics are available with multiple decks, providing up to five particle size classifications, constructed from the highest-quality stainless steel and can be customized to your precise requirements. They're available in diameters ranging between 24" and 72".

G-Max Separators are available in the following diameters: 48" and 60".

Centre Discharge Separators are available in the following diameters: 24", 30", 36", 40", 48" and 60".
