

SEPARATORS FOR THE FOOD & BEVERAGE INDUSTRY

Vibrating Separators for the Food & Beverage Industry

Producing high quality foods and beverages for sophisticated consumers demands the use of separation equipment that performs to the most exacting of standards. Tec Scrn vibrating separators are engineered to deliver in every regard – sifting and screening your products effectively from hot to cold, liquid to solid and coarse to fine. Food and beverage production facilities across North America trust our separation equipment to perform ingredient packing, final pre-packaging, tea screening, juice straining, flour production and de-lumping of icing sugar, to name just a few applications.

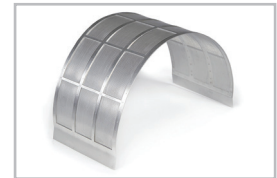

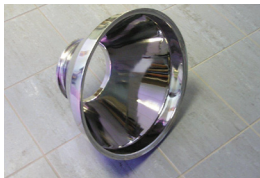

Centre Discharge Separators for Food & Beverage

Our Centre Discharge Separators and Circular Vibrating Separators deliver the durability, dependability and safety required for the food and beverage industry. Our vibratory drive system can be strategically adjusted to provide an infinite range of separating patterns for virtually any food and beverage application imaginable, and Tec Scrn's engineers can work with your product in our test facility to establish

the most efficient configuration for your screening process. Our vibrating separators are available with multiple decks, providing up to five particle size classifications, constructed from the highest-quality stainless steel and can be customized to your precise requirements. They're available in diameters ranging between 24" and 72" and can be finished to sanitary standards if required.
