

## SEPARATORS FOR SHOT PEENING & METAL FABRICATION

### Vibrating Separators for Shot Peening & Metal Fabrication

Tec Scrn circular vibrating separators are widely used in the metal preparation industry, and for good reason. The accuracy and precision of our sifting and sorting equipment is unrivalled, and our engineering team has the ability to custom fabricate parts and machinery to your precise specifications.

*Centre Discharge Separators are available in the following diameters: 24", 30", 36", 40", 48" and 60".*

*G-Max Separators are available in the following diameters: 48" and 60".*

Shot peening can extend the life of metal products through strategically impacting the metal with shot, changing its surface and helping to prevent fatigue and stress corrosion. To remain effective during this process, the worn and off-sized shot must be sorted, separated and then blended with virgin materials for effective re-use. Tec Scrn separators are ideally suited for this task.
